Escalate your Security with Night Sabre

Traditional security measures are no longer enough. An alarm system and a few cameras alone are no longer considered effective deterrents. That's why Device Smart has pioneered escalating deterrence - a proactive approach designed to disrupt intruders before they can act.

The Night Sabre security lights are at the forefront of this innovation. Motion-activated at up to 9 meters, they instantly illuminate intruders. If a secondary trigger- such as a camera, vibration sensor, or perimeter beam - detects further movement, the system escalates, activating a strobing alarm with red and blue flashing LEDs. This unmistakable signal tells intruders they've been detected, triggering their natural instinct to flee in search of an easier target.

With automated operation and no user intervention required, Night Sabre ensures your property remains protected without relying on external alarm response.
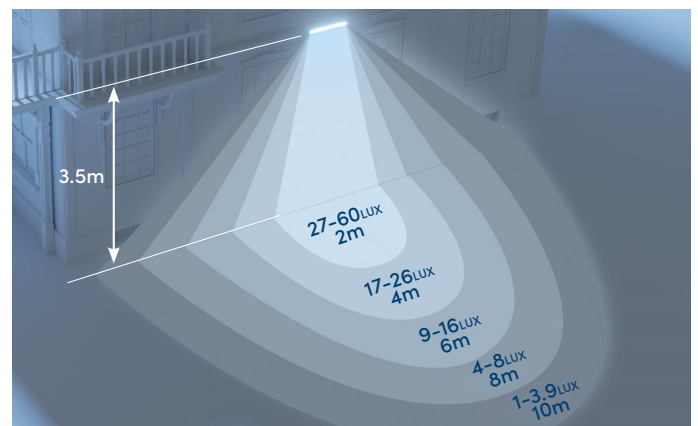

Escalating deterrence is the future of security—stopping threats at the perimeter before they become a problem. Night Sabre makes your property a harder target from the very first step.

- Discreet Linear floodlight for low profile installations
- Accurate 9m Digital PIR
- Low voltage power - no electricians required

- Easy installation with 2 clips
- Choice of colours - white or anthracite
- Choice of sizes (12v version) - 480mm or 680mm with 2000 lumens
